

**A Manual for
Performance Measurement**

Fairfax County

**Performance Measurement Team
Department of Management and Budget
Ninth Edition
2005**

Foreword

When the *Fairfax County Measures Up* manual was first developed for agencies to use in preparing the FY 1999 Budget, it was noted that the first edition would be the first of many maps on the road toward higher performance. Since that time, thousands of County staff have used the manual to develop and improve goals, objectives and performance indicators for the budgets from FY 1999 to FY 2006. The general consensus is that the information regarding program performance continues to improve through better linkage of mission, goals, objectives and indicators, as well as a more balanced picture of performance through the use of the Family of Measures – *output, efficiency, service quality and outcome*.

Once again, these instructions have been updated to reflect additional information available and lessons learned over the past eight years. It is important to note that **there are no changes to the methodology**. We will continue to use the same process that staff is accustomed to by now, including the efficiency calculation spreadsheet that was introduced for the FY 2000 budget to ensure consistency and accuracy in computing cost per unit. Updates to this manual since then include an expanded section on setting targets, the program logic model, the County's benchmarking efforts, and how Fairfax County uses performance measurement to improve. This year's manual reinforces the linkage of performance measurement with the County's strategic planning effort.

Since this effort began, Fairfax County has continued to evolve its approach to continuous improvement, now manifested in the Fairfax Framework for Excellence (FfX) which is based on the High Performance Organization (HPO) model. More information on this model is available to staff on the County's Intranet at <http://infoweb/LEAD/>. Since a major component of FfX is strategic planning, identifying WHAT we want to achieve (our MISSION), performance measurement is a critical corollary for determining HOW WELL we are meeting that mission. This edition contains additional information showing how we make that link.

However, even this ninth edition should be considered a "work in progress" as we continue to learn more about performance measurement and refine the approach used in Fairfax County. Since we measure performance in order to continuously improve, it is just as important that we strive to continuously improve performance measurement as well.

The multi-agency Performance Measurement Team will continue to work with agencies to fine-tune performance measures in the FY 2007 budget. We look forward to working with all County agencies to integrate performance measurement, not only in the budget document, but in all management processes in order to achieve maximum benefit and ensure continuous improvement in all the services we provide to the citizens of Fairfax County.

I. INTRODUCTION

What is Performance Measurement?

Performance measurement is the regular collection of specific information regarding the results of County services. It includes the measurement of the kind of job we are doing, and addresses the effect our efforts are having in our community. Together with strategic planning, benchmarking and continuous improvement, performance measurement forms the nucleus for managing for results.

Performance measurement by Fairfax County government is not a new activity. In fact, data have been tracked back to the 1960s. What is new in recent years, however, is the emphasis on the various aspects of performance, particularly outcome. Traditionally, many local governments have managed on the basis of inputs such as the number of employees and the size of the budget, as well as the volume of workload accomplished or outputs, an example of which is the number of police calls. A survey of Fairfax County's management indicators published in the FY 1998 Budget revealed that approximately 84 percent were output-oriented.

However, Fairfax County, like many local governments, realized that these kinds of indicators paint an incomplete picture of efforts. As a result, the performance measurement system was enhanced to more systematically include indicators of efficiency, quality and effectiveness. Since implementing its enhanced methodology, Fairfax County has seen outputs drop to less than one-third of all indicators reported in the budget, with efficiency, service quality and outcomes comprising over two-thirds of all measures.

In general, a good performance measurement system should be able to provide answers for the following questions.

- What was achieved?
- How efficiently was the work done?
- How were citizens helped by the effort?

Why Measure Performance?

The most powerful reason for measuring performance is that citizens are continually demanding more responsive and competitive government. In Fairfax County, revenue growth has been limited, while citizen expectations for top quality services remain high. Balancing these realities has been, and will continue to be one of the most significant challenges facing us. In the quest for a consensus on services, service levels, service

quality and cost, the need for sound information about the *performance* of services remains vital.

Performance measurement is a practice that has permeated all levels of government – from the federal government’s Government Performance and Results Act of 1993 (GPRA) to numerous state and local programs. Rather than being a passing fad, performance measurement is a practice that is being integrated into all aspects of management, including but not limited to, performance budgeting, strategic planning, compensation strategies, and continuous improvement efforts.

In 1994, the Government Accounting Standards Board (GASB) adopted a concept statement strongly encouraging local governments to provide annual Service Efforts and Accomplishments or “SEA” reporting, a type of standardized performance report that provides a means for comparing government performance over time and against other jurisdictions. While SEA reporting is not mandated, there is the expectation that governments at all levels should disclose performance data as they do financial data so citizens and elected officials have access to the information they need to make informed decisions in a democratic society.

Benefits of Performance Measurement

In addition to these reasons, many governments report beneficial changes to their organizational culture as a result of performance measurement. We have seen similar benefits accrue for Fairfax County. In general, governments that measure performance do so because it:

- Supports strategic planning and goal-setting
- Strengthens accountability
- Enhances decision-making
- Improves customer service
- Assists governments in determining effective resource use

Performance Measurement Approach - Overview

In the first phase, we began with an assessment of existing goals, objectives and indicators to reorient our system from measurement of outputs toward outcomes. Through a four-step process, we examined agency mission, goals and objectives, and then developed indicators to measure performance. This process was intended to improve operational and resource planning, and resulted in improved goal statements, objectives and performance indicators published in the FY 1999 Adopted Budget Plan. That methodology will be continued for the FY 2007 Budget.

Secondly, we began comparing performance measures externally. Fairfax County initiated a Regional Performance Measurement Consortium in the fall of 1998 in order to share performance measurement methodologies with other local governments in Virginia and Maryland as well as the District of Columbia. Benchmarking is a continuous process, which enables organizations to strive for and in some cases, even surpass some previously determined standard. Benchmarking can be viewed as a systematic process of searching for best practices, innovative ideas, and highly effective operating procedures that lead to superior performance. With improved knowledge, practices, and processes gleaned from the benchmarking process, agencies can take actions to improve performance.

In this phase, Fairfax County also expanded its benchmarking horizons by joining the International City and County Management Association's (ICMA) Center for Performance Measurement. Membership in this annual benchmarking effort provides the County with access to performance data from more than 100 jurisdictions across the country that are also committed to excellence. This will also further the goal of continuous improvement by providing comparative data the County can use to gauge performance in relation to other jurisdictions, as well as learn best practices from high performers. The areas that Fairfax County benchmarks as part of this effort include:

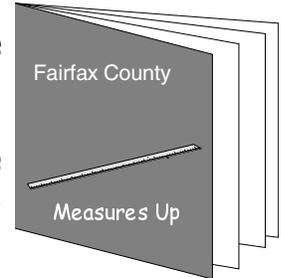

- | | |
|------------------------|---------------------------------|
| Police Services | Fire/EMS Services |
| Library | Parks and Recreation |
| Housing | Code Enforcement |
| Youth Services | Refuse Collection and Recycling |
| Fleet Management | Facilities Management |
| Information Technology | Purchasing |
| Human Resources | Risk Management |

In the third phase, the County undertook a more systematic linkage between strategic plans, performance measurement and the budget. The County's budget underwent a significant redesign for FY 2005 in which agencies addressed the linkage between their Mission, Focus, New Initiatives and Recent Accomplishments, and Performance Measures. At the program area level, e.g., public safety, public works, health and welfare, etc., benchmarking data were included in the budget to demonstrate how Fairfax County's performance compares with other jurisdictions. Finally, at the countywide level, Key County Indicators were provided that demonstrate accountability for achieving the County's seven vision elements.

Purpose of the Manual

This manual was first prepared in an effort to get us started. It remains the cornerstone of instructions to continue to measure performance in Fairfax County. The purpose of the manual is to:

- Explain the importance of performance measurement and why we continue to improve our system.
- Provide information about the components of a performance measurement system – mission, goals, objectives and indicators, and how they should be linked and presented.
- Provide guidance on how to focus goals on outcomes, determine service areas, focus objectives on outcomes, and develop indicators that give us useful feedback.
- Provide guidelines on allocating costs to service areas in order to calculate various indicators.

As mentioned in the Foreword, this manual is a starting point and will continue to be improved according to identified needs. As our experience and understanding grows, additional information, examples, techniques, and tips will be added. We gladly invite your ideas and request that they be directed to any of the members of the team listed on page 28 of this document or forwarded to:

*Performance Measurement Team
Department of Management and Budget
Suite 561, Government Center*

Summary

The following succinctly summarizes why performance measurement is essential.

WHY MEASURE PERFORMANCE?

If you don't measure results, you can't tell success from failure.
If you can't see success, you can't reward it.
If you can't reward success, you're probably rewarding failure.
If you can't see success, you can't learn from it.
If you can't recognize failure, you can't correct it.
If you can demonstrate results, you can win public support.

*Reinventing Government
David Osborne and Ted Gaebler*

II. IMPROVING PERFORMANCE MEASUREMENT

Previous Performance Measurement System

A study of Fairfax County's previous (pre-FY 1999) performance measurement efforts revealed that while our system compared very favorably to many jurisdictions, room for improvement existed. Opportunities for improvement centered on the following:

- **Aligning indicators and objectives.** Almost one-third of the indicators presented in the FY 1998 Adopted Budget Plan did not correlate with stated objectives; and
- **Orienting Goals, Objectives and Indicators toward Outcomes.** Almost 84 percent of the indicators tracked workload or output rather than service quality, efficiency and outcome.

A similar inventory of the FY 1999 Advertised Budget Plan found that County agencies made significant progress in just the first year of this effort as noted by the following:

- 89 percent of the objectives had outcomes associated with them. By the FY 2002 Budget Plan, 100 percent of objectives are now aligned with outcome indicators.
- While outputs still comprise the largest percentage of the four indicator types at 31 percent, that percentage is down considerably from the previous 84 percent. In addition, greater distribution was found among efficiency, service quality and outcome, which represent 24, 21 and 24 percent of all indicators, respectively.

Timetable for the Ninth Year of Enhanced Performance Measurement

The timetable for the ninth year is also designed around the existing budget process to avoid delays in routine budget development and to have updated performance measurement information available for publication in the FY 2007 Advertised Budget Plan.

Month/Year	Activity
July 2005	Revisions to the FY 2007 Budget Development Guide, and the <i>Fairfax County Measures Up</i> Manual are disseminated. Agencies begin updating performance indicators for the FY 2007 Budget. In addition, the PM Team will be available to assist agencies improve current measures. Agencies are encouraged to "work early and often" with the PM Team to resolve issues. The DMB analyst for the agency should also be involved in these discussions to ensure consistency and understanding, as well as to contribute to the process.
September 2005	Agency staff produce performance measurement information for the FY 2007 Budget by reporting FY 2005 actual data, and developing estimates for FY 2006 and FY 2007. Since agencies have had seven years

Month/Year	Activity
	to refine their measures, "Not Available (NA)" will not be an acceptable response for these estimates. <i>Exceptions are where an agency is changing its measures to align with its strategic plan. If this is the case, the agency should work with its DMB budget analyst and the PM Team to coordinate these changes.</i> Please be aware that <u>agencies are responsible for providing actual data for any published estimates</u> , even if future performance measures have been changed.
September-December 2005	DMB reviews, analyzes and compiles performance measurement information in preparation for review by the County Executive and inclusion in the FY 2007 Budget.
October-December 2005	County Executive and senior management staff as well as DMB staff meet with agencies to discuss their PM results for the previous fiscal year.
December 2005 – January 2006	County Executive review of the <u>FY 2007 Advertised Budget Plan</u> .
February 2006	<u>FY 2007 Advertised Budget Plan</u> is released.

Agency Submission

As indicated above, each agency must submit performance measures to the Department of Management and Budget (DMB) for the FY 2007 Advertised Budget Plan as part of the regular baseline and addendum budget submission based on each agency's designated due date. Due to fiscal constraints, there will be no addendum requests beyond those associated with new facilities and mandates, which should be accompanied by relevant performance measures to be considered for funding. ***If a request is important enough to ask for, an agency should have supporting data on how the resources will improve performance.*** The following should be provided with each budget/PM submission:

- A transmittal memo for the budget and performance measures signed by the agency director.
- PM data entered into the PM database. This data will then be linked into the Word document by DMB and published in the FY 2007 Advertised Budget Plan. This data must be entered concurrent with the budget submission to allow comprehensive budget review and ensure data are available in time for the fall PM meetings with the County Executive. Failure to provide actuals may result in showing a very low percentage of targets met.
- A spreadsheet for any efficiency indicator that represents cost per unit so DMB can verify calculations and if necessary, make any adjustments based on potential revisions to funding levels.

III. LINKING STRATEGIC PLANNING TO PERFORMANCE MEASUREMENT

Fairfax County has adopted the Fairfax Framework for Excellence (FFX) model, which is about building and aligning leadership and performance at all levels of the organization in order to achieve our vision and do our best work for the community. For the past few years, many County staff have been trained using the LEAD (Leading, Educating and Developing) model for high performance organizations (HPOs). Staff have discussed extensively what it means to be an HPO. As this process has evolved, the need to align agency strategic plans, budgets and performance measures with the Countywide Purpose and Vision Elements has become increasingly clear. The following purpose and vision elements serve as a clear structure for identifying what we collectively want to achieve and how we envision the County if we are successful.

COUNTY CORE PURPOSE AND VISION ELEMENTS

**To protect and enrich the quality of life for the people, neighborhoods,
and diverse communities of Fairfax County by:**

**Maintaining Safe and Caring Communities
Practicing Environmental Stewardship
Building Livable Spaces
Maintaining Healthy Economies
Connecting People and Places
Creating a Culture of Engagement
Exercising Corporate Stewardship**

Maintaining Safe and Caring Communities

The needs of a diverse and growing community are met through innovative public and private services, community partnerships and volunteer opportunities. As a result, residents feel safe and secure, capable of accessing the range of services and opportunities they need, and are willing and able to give back to their community.

Practicing Environmental Stewardship

Local government, industry and residents seek ways to use all resources wisely and to protect and enhance the County's natural environment and open space. As a result, residents feel good about their quality of life and embrace environmental stewardship as a personal and shared responsibility.

Building Livable Spaces

Together, we encourage distinctive "built environments" that create a sense of place, reflect the character, history and natural environment of the community, and take a variety of forms – from identifiable neighborhoods, to main streets, to town centers. As a result, people throughout the community feel they have unique and desirable places to live, work, shop, play and connect with others.

Maintaining Healthy Economies

Investments in the work force, jobs, and community infrastructure and institutions support a diverse and thriving economy. As a result, individuals are able to meet their needs and have the opportunity to grow and develop their talent and income according to their potential.

Connecting People and Places

Transportation, technology and information effectively and efficiently connect people and ideas. As a result, people feel connected to their community and have the ability to access places and resources in a timely, safe and convenient manner.

Creating a Culture of Engagement

Individuals enhance community life by participating in and supporting civic groups, discussion groups, public-private partnerships, and other activities that seek to understand and address community needs and opportunities. As a result, residents feel they can make a difference and work in partnership with others to understand and address pressing public needs.

Exercising Corporate Stewardship

Fairfax County is accessible, responsible and accountable. As a result, actions are responsive, providing superior customer service and reflecting sound management of County resources and assets.

How are Strategic Planning and Performance Measurement Linked?

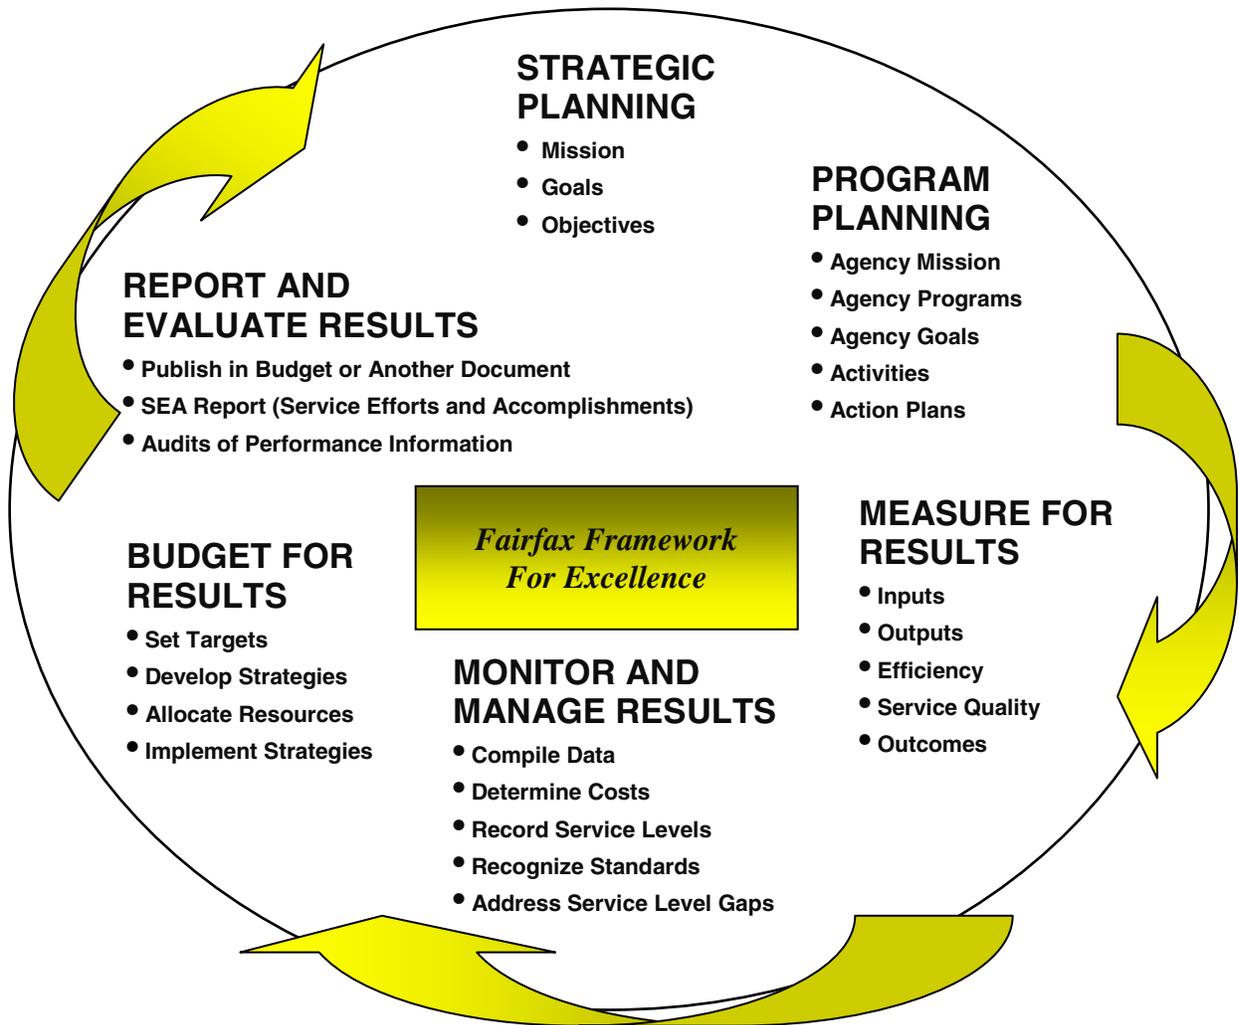

Strategic planning is the process of looking toward the future, typically a 2-5 year horizon, identifying why an organization exists (MISSION), what it would look like if it achieved its mission (VISION) and the concrete steps (GOALS) it must take to achieve that vision. Data that tell if you are achieving results on your strategic plan are PERFORMANCE MEASURES. Performance measurement helps translate an organization's mission, vision and strategy into tangible objectives.

This integrated process, known as **Managing for Results**, is based on

- Identifying strategic goals and objectives as well as relevant measures;
- Determining what resources are necessary to achieve them;
- Analyzing and evaluating performance data; and
- Using that data to drive improvements in an organization.

The diagram on the following page illustrates the Managing for Results process. It is continual, with each of the components connected to the others.

MANAGING FOR RESULTS IN FAIRFAX COUNTY

IV. PERFORMANCE MEASURES - THE TERMINOLOGY

Family of Measures

While many jurisdictions measure performance, there are variations in how each classifies indicators, as well as their approach for how it is done. This guide provides a standard Fairfax County approach to ensure that we are consistent in reporting performance measurement information. For example, one of the most common mistakes in terminology made is when some think efficiency is how quickly a task is accomplished. While that may relate to a literal definition of the word, Fairfax County and the Government Accounting Standards Board (GASB) consider efficiency to be the ratio of inputs to outputs or how much output is derived from a unit of input (e.g., budget dollars, staff time, etc.). Timeliness (how quickly something is done) is a measure of service quality. Please pay particular attention to how these terms are used as part of Fairfax County’s methodology, which is designed to ensure consistency across all agencies.

Fairfax County’s methodology encompasses a *Family of Measures* approach in order to present a balanced picture of performance instead of focusing it narrowly on a single aspect such as quantity produced (output) or cost (efficiency). The *Family of Measures* includes the following types of indicators:

Terminology	Definition	Examples
Input	Value of resources used to produce an output.	<ul style="list-style-type: none"> • Dollars budgeted/spent • Staff hours used
Output	Quantity or number of units produced. Outputs are activity-oriented, measurable, and usually under managerial control.	<ul style="list-style-type: none"> • Eligibility interviews conducted • Library books checked out • Children immunized • Prisoners boarded • Purchase orders issued • Patients transported
Efficiency	Inputs used per unit of output (or outputs per input).	<ul style="list-style-type: none"> • Cost per appraisal • Plans reviewed per reviewer
Service Quality	Degree to which customers are <u>satisfied</u> with a program, or how <u>accurately</u> or <u>timely</u> a service is provided.	<ul style="list-style-type: none"> • Percent of respondents satisfied with service • Error rate per data entry operator • Frequency of repeat repairs • Average days to address a facility work order
Outcome	Qualitative consequences associated with a program/service, i.e., the ultimate benefit to the customer. External forces can sometimes limit managerial control; however, managers are still responsible for outcomes associated with their programs. Outcome focuses on the ultimate “why” of providing a service.	<ul style="list-style-type: none"> • Reduction in fire deaths/injuries • Percent of job trainees who hold a job for more than six months • Percent of juveniles not reconvicted within 12 months • Adoption/redemption rate of impounded animals

V. FOUR-STEP METHODOLOGY

A four-step process is used to develop agency performance measures.

Step 1. Review and Evaluate Existing Agency Mission and Cost Center Goals.

Agencies should use their mission as identified during their strategic planning process. At the next level are goals, which give more specific direction on how the agency will achieve its mission; however, they are generally not quantified and span multiple fiscal years. A good goal statement should:

- Begin with "To" and a verb
- Say generally what the cost center does
- Identify customers
- State why a cost center exists
- Be associated with an outcome indicator (statement of accomplishment)

The following is a useful template for writing or validating a goal statement.

<p><u>Goal Statement</u></p> <p>To provide/produce (<u>service or product</u>)</p> <p>to (<u>customer</u>)</p> <p>in order to (<u>statement of accomplishment</u>).</p>
--

An outcome indicator should be identified that enables measurement of the extent to which a goal has been achieved. An example of how a cost center goal fits into the above template can be found in the case of Health Department's Adult Day Care Center Cost Center whose goal is:

To provide adults with disability a comprehensive day program designed to assist individuals to remain in the community, to obtain a maximum level of health, to prevent or delay further disability, and to provide respite for family members/caregivers.

A tip to consider:

If you think of goal statements in terms of your customers, outcomes will be easier to identify. Who are your customers? These can be internal or external. For example, the Department of Information Technology may have few external customers for its services, but it has many internal agency customers. Ask yourself **"what ultimate benefit will these customers receive if the program/service is effective?"**

Step 2. Identify Service Areas.

Ask yourself, what do you do? You can use the 2002 Inventory of County Activities, Programs and Services (ICAPS) as well as the FY 2006 Budget to identify major activities.

Agencies have limited resources with which to measure performance and therefore must be strategic in what they select. To avoid micro-measurement, activities should be consolidated into service areas that will be used as the basic level for developing objectives and indicators. Some cost centers may have a single service area, while others may have several. Service areas should have a common purpose and lead to a common outcome for the customers of the service. To define service areas, identify the major activities you perform and conceptually collect these activities into a logical group with a common purpose. Consider the word "major" according to the following elements:

- Activities that consume a major portion of the cost center's budget
- Activities that are critical to the success of the agency's mission
- Activities that have a significant customer service focus
- Activities that are politically sensitive or frequently in the spotlight due to attention by the BOS, public, and/or media (stakeholders)

Step 3. Define Service Area Objectives

Service area objectives are outcome-based statements of specifically what will be accomplished within the budget year. While strategic plans stretch across multiple years and cannot generally be accomplished in one year, the annual budget addresses that portion of the plan the agency can accomplish in a given fiscal year.

Each service area will have at least one objective statement and at least one indicator of each type, i.e., output, efficiency, service quality and outcome. The service area objectives should clearly demonstrate progress toward the cost center goal.

Ideally, each objective should have an attainable target level with a basis in scientific research, industry practice, peer average, or Board policy. Agencies should focus on quantified objectives and develop applicable targets for the FY 2007 annual budget process.

In general, a service area objective should address the following.

- Support the cost center goal statement
- Reflect planned benefit(s) to customers
- Be written to allow measurement of progress
- Be quantifiable within the fiscal year time frame
- Describe a quantifiable future target level (if appropriate)

The following template can be used for writing an objective statement.

Objective Statement

To improve/reduce (accomplishment)
by (a number or percent) from X to Y, [toward a target
of (a number)].
**Note: the last (target) part is optional; to be used
as appropriate.**

Some examples of service area objectives in the Maternal and Child Health Services Cost Center of the Health Department are:

- To improve the immunization completion rate of children served by the Health Department by 1 percentage point, from 80 to 81 percent, toward a target of 90 percent, which is the Healthy People Year 2010 goal.

Step 4. Identify Indicators that Measure Progress on Objectives

Indicators are the first-level data for reporting performance and WHERE POSSIBLE, at least one output, efficiency, service quality and outcome indicator should be developed for each service objective. As previously indicated, the complete *Family of Measures* conveys the extent to which a service area objective and cost center goal have been met.

When developing indicators, you should ask how you can measure whether you are meeting your objectives. Since this is the ninth year of the enhanced system, NA (Not Available) should only be used for prior year actuals where objectives and indicators did not previously exist. This may be due to agencies changing their service areas, objectives and/or indicators substantially to align with their strategic plans and have not yet established a baseline. In those situations, the agency should work with their DMB budget analyst and the Performance Measurement Team to determine the most appropriate manner to present the new measures.

Examples of various service areas, objectives and Families of Measures are shown on the next page.

Sample Families of Measures

Service Area	Objective	Input	Output	Efficiency	Service Quality	Outcome
Delinquent Tax Collection	To maintain 30 percent collection of delinquent accounts receivables, while maintaining a cost per dollar collected of no more than \$0.18.	Budget/ actual costs Staff	Delinquent taxes collected	Cost per delinquent dollar collected	Percent of bills deliverable	Percent of delinquent taxes collected
Juvenile Community-Based Residential Services (CBRS)	To have at least 65 percent of CBRS residents with no subsequent criminal petitions within 12 months of case closing in order to protect the public safety.	Budget/ actual costs Staff	CBRS child care days provided	CBRS cost per bed day	Percent of parents satisfied with CBRS services	Percent of CBRS-discharged youth with no new delinquent petitions for one year
Fire Suppression	To maintain fire loss at 0.02% or less of Total Property Valuation, while striving to minimize fire deaths and injuries by keeping civilian fire deaths to less than 1 per 100,000 and civilian fire injuries to less than 10 per 100,000.	Budget/ actual costs Staff	Incidents responded to	Cost per incident	Average suppression response time (in minutes)	Fire deaths per 100,000 population Fire injuries per 100,000 population Fire Loss
Senior-Based Services	To maintain at 95 percent, the percentage of seniors receiving community-based services who remain living in the community rather than entering an institution after one year of service or information.	Budget/ actual costs Staff	Clients served	Cost per client	Percent of clients satisfied with services provided	Percent of clients who remain in the community after one year of service
Capital Facilities	To monitor design and construction activities in order to maintain construction cost growth at no more than 5.0 percent.	Budget/ actual costs Staff	Projects completed	Engineering design costs as a percent of total project cost	Percent of projects completed on time	Contract cost growth (percent)

Completing the Performance Measurement Worksheet

A one-page worksheet is used to record the "Family of Measures" for each service area within a cost center. In situations where agencies only need to update their objectives and indicators, but are not substantially altering them, i.e., adding, deleting, etc., ***use of the worksheet is not necessary. Objectives and indicators are updated in the PM database.*** If however, agencies wish to substantially revise the measures published in the FY 2006 Adopted Budget Plan, a completed worksheet is recommended for each revised service area objective, *as well as an explanation of how the revision will improve the agency's performance measurement.*

The form is available in Word format for your use. Rows may be added if necessary to complete the form. Appendix A contains a blank copy of the form.

For cost centers with multiple service areas, repeat the form for each service area. However, it should be noted that it is acceptable, and even preferable, to have one good objective and family of measures per cost center rather than a number of weak ones.

In completing the worksheet, follow the steps below, which correspond to the 4-step methodology.

Index Info: For each cost center, enter the agency and cost center name, agency number, contact name and phone number on the initial worksheet page. For subsequent service areas within a cost center (if applicable), this portion of the worksheet can be blank.

Step 1: Enter the cost center goal statement in the cell directly below the title "Cost Center Goal."

Step 2: Enter the service area title in the space to the right of the cell titled "Service Area."

Step 3: Enter a service area objective in the space to the right of the cell titled "Service Area Objective."

Step 4: Enter at least one indicator title in the cells to the right of the row that begins with "Indicator." Enter the formula for calculation of the indicator in the cells to the right of the row that begins with "Indicator Calculation." Enter the data sources for the indicator in the cells to the right of the row, which begins with "Data Source(s)."

This form is important when establishing measures because it documents where data come from, as well as any necessary calculations. When staff assignments change (and this is very likely), this document helps to ensure that agencies track and report performance data consistently and accurately.

On the following page is an example of a completed Performance Measurement Worksheet for the Maternal and Child Health Services Cost Center of the Health Department.

PERFORMANCE MEASUREMENT WORKSHEET EXAMPLE

Agency/Cost Center Name: Health Department/Maternal and Child Health Services
 Agency Number: 71
 Agency/Cost Center Contact: _____ Phone: _____

Cost Center Goal		Outcome Indicator			
To provide maternity, infant and child health care and/or case management to at-risk women, infants and children in order to achieve optimum health and well-being.		Immunization Completion Rate for Children Using Health Department Services			
Service Area: Immunization					
Service Area Objective: To improve the immunization completion rate of children served by the Health Department by 1 percentage point, from 80 percent to 81 percent, toward a target of 90 percent, which is the Healthy People Year 2010 goal.					
	Input Indicators	Output Indicator	Efficiency Indicator	Service Quality Indicator	Outcome Indicator
Indicator	Budget and actual costs	Children seen for immunizations Vaccines given	Cost per vaccine	Percent of clients satisfied with service	Two-year-old completion rate
Indicator Calculation	Personnel Services + Operating Expenses + Equipment + Fringe Benefits Less revenue received	Total children seen Total vaccines given	Total Cost Vaccines / Total number of vaccinations administered annually	Total satisfied / Total respondents	Percent completing immunization schedule
Data Source(s)	BPREP and FAMIS	HMIS	See input and output indicator	Point-of-service survey of clients	HMIS

The agency also provided the following data in their "Performance Measurement Results" narrative section of their budget: **CDC information states that for every dollar spent on immunizations, \$10 is saved in future medical costs and the indirect costs of work loss (parent), death and disability.**

This is useful explanatory information that contributes to better understanding of the program's benefits. It provides quantifiable benefits that the public can understand and appreciate.

Completing the FY 2007 Advertised Budget Plan Cost Center Section

Since this is the ninth year of the County's enhanced performance measurement, agencies have spent considerable time selecting and refining indicators. Depending on the direction of an agency's strategic plan, there may be little or no change to the indicators. The objectives are the key areas to focus on for updating. Start with your FY 2006 Adopted Budget Plan and follow that format for agency mission, cost center goals, objectives and indicators. Provide actual data for FY 2005 and make projections for FY 2006 and FY 2007 based on prior year actuals, current resources and anticipated performance.

When formulating/updating your objectives, please ensure that the target is a reasonable stretch from the current fiscal year (FY 2006) to the budget fiscal year (FY 2007). Do not use FY 2005 as your base for calculating percent change; use FY 2006 to FY 2007. These numbers should correspond to the estimates shown in the Performance Indicators table for those fiscal years. However, you will want to look at all prior years for which data are available in order to ascertain trends and make reasonable projections. When setting targets, there are several points of reference to consider:

- Previous performance – how it can be improved
- Industry or national standards – for example, benchmarks established by the International Facilities Management Association or the Healthy People 2010 targets
- Mandates by federal, state or local governing bodies

It is important to consider what can be accomplished given the anticipated level of resources and the expectation that County services will be provided in the most efficient and effective manner. It is also essential to remember that these targets are reviewed by the Board of Supervisors as well as the public, and targets that are set artificially low are subject to questions and revision.

The Logic Model

Programs offered by Fairfax County can range from very simple to highly complex. Some County staff, particularly in the Human Services area, have used a program logic model in order to develop performance measures for their programs. A program logic model is a description of how the program works in order to achieve the desired benefits. The diagram captures a series of "if-then" changes that the program intends to influence through its inputs, activities and outputs. The model will:

- Enable the agency to think through the steps and develop a realistic idea of what the program can accomplish;
- Provide a useful framework for identifying outcomes; and
- Identify important program components that must be tracked in order to assess program effectiveness.

Logic models are usually diagrammed as a series of boxes representing **inputs, outputs (including activities and strategies), and outcomes**. They may be drawn either horizontally or vertically. An example is shown on the following page.

LOGIC MODEL

INPUTS	OUTPUTS	OUTCOMES		
What we invest	What we do (activities/strategies)	Short-term	Medium-term	Long-term
Staff Dollars Volunteers Materials Equipment Technology	Workshops Outreach Inspections Assessments Monitoring	Awareness Knowledge Attitudes Skills	Behavior Decisions Policies	Conditions: Safety Economic Social Environment Civic

Inputs are resources dedicated or consumed by a program. Examples include money, staff and staff time, facilities, equipment and supplies.

Outputs are the direct products of program activities and used are measures in terms of the volume of work accomplished, i.e., classes taught, people served, applications processed, etc. **Activities** are what a program does with the inputs to fulfill its mission. Activities include the strategies, techniques and types of services that comprise a program’s service methodology.

Outcomes are *benefits* resulting from program activities. For a human services program, it is generally some change in a participant’s condition; for economic development, it is change in an area’s economic status; and for public safety, it can be the degree to which citizens are or feel safe.

In using the logic model, agencies can start with the last step, i.e., identifying outcomes, and then work backward to identify the objective, service area and even cost center goal. This is not required; however, some staff have noted that this process works better for them. What is important is that the key steps in the development of meaningful measures are not overlooked.

The following is an example of how a logic model could be completed for a Fire and Rescue Department goal area of “To protect lives and property.”

INPUTS	OUTPUTS	OUTCOMES		
What we invest	What we do (activities/strategies)	Short-term	Medium-term	Long-term
Staff Dollars Volunteers Materials Equipment Technology	Training Inspections Emergency response Public education	Skill level of personnel Results of inspections Citizens educated	Response time Fire containment Percent of buildings with fire code violations Prevalence of smoke detectors	Protection of lives and property (fire deaths, injuries, fire loss)

What Constitutes a Good Performance Measurement System?

In preparing meaningful performance measures, keep the following principles in mind. Measures should be:

- Results-oriented - focused primarily on desired outcomes, less emphasis on outputs
- Important - concentrate on significant matters
- Reliable – accurate, consistent information over time
- Useful - information is valuable to both policy and program decision-makers and can be used to provide continuous feedback on performance to agency staff and managers
- Quantitative - expressed in terms of numbers or percentages
- Realistic - measures are set that can be calculated
- Cost-effective - the measures themselves are sufficiently valuable to justify the cost of collecting the data
- Easy to interpret - do not require an advanced degree in statistics to use and understand
- Comparable - can be used for benchmarking against other organizations, internally and externally
- Credible - users have confidence in the validity of the data

Limitations of Performance Measurement

In theory, performance measurement has many benefits and advantages as well as limitations. Some try to use these limitations as reasons not to pursue performance measurement, and in doing so, forego its benefits. The following includes the typical arguments used; the response to those reasons follows each one.

- **You can't measure what I do.** RESPONSE: Areas previously thought to be "unmeasurable" such as education, welfare, and even international relations have been shown to be measurable if someone is motivated and creative enough to pursue an innovative approach. Since so many governments have initiated performance measurement in recent years (and others have done so for quite some time), more information than ever exists for staff to reference.
- **It's not fair because I don't have total control over the outcome or the impact.** RESPONSE: It is the rare program that anyone has total control over the outcome, but if you can't demonstrate any impact on the result, then why are we funding your program?
- **It will invite unfair comparisons.** RESPONSE: Comparison is going to happen whether you like it or not. By taking the initiative in selecting comparable organizations, you can help your

program by proactively comparing performance, determining how well you are doing, and seeking ways to improve your performance.

- **It will be used against me.** RESPONSE: Demonstrating openness and accountability, even when the news is not so good, inspires trust. If you are open about where you need to improve, most people will give you the benefit of the doubt as long as you demonstrate that you are sincerely seeking to improve. Cynical manipulation of measures, i.e., selecting overly easy targets or ignoring key data, will likewise cause the public to question your motives and credibility and will lead to mistrust. In fact, being honest about your performance and how you can improve can actually help you win support for additional resources.
- **It's just a passing fad.** RESPONSE: Anyone who thinks performance measurement is just a passing fad need only pick up any public administration-related document to learn that it is being used at the federal, state and local levels of government, with no indication that the requirements for its use, i.e., accountability, continuous improvement, better information for decision makers, etc. will abate. In fact, if anything, pressure to demonstrate accountability and improvement is only expected to increase.
- **We don't have the data/we can't get the data.** RESPONSE: In this age of information technology, it is hard to believe that performance data are not available. If a program is important enough to fund, staff should be able to find some way to collect data on its effectiveness. It can be as simple as a desktop spreadsheet using information collected from a hard-copy log or it can be trained observer ratings, with numerous variations in-between. What is important is that critical indicators of success are identified and measured consistently and conscientiously.
- **We don't have the staff resources to collect the data.** RESPONSE: The reality is that administrative-type positions will not be added for performance measurement; however, staff should realize that dedicating 5 percent of their time to come up with thoughtful measures, collecting the data on those measures, and then using the data to manage for results, will generally save a larger portion of their time that they would have spent correcting service problems down the road.

Administrative Cost Centers

In previous years, some administrative cost centers were unable to provide indicators in the budget document due to the complexity of defining the variety of micro tasks and measurement difficulty associated with administrative activities.

However, these cost centers also represent County-funded programs and we have the responsibility to report on the performance of all types of services. Administrative cost centers provide services to internal customers within an agency and the needs of these customers are definable and measurable. The following table lists examples of the Family of Measures for various administrative service areas, but is not intended to be all-inclusive, so agencies are encouraged to develop additional/alternate measures as appropriate.

EXAMPLES OF MEASURES IN ADMINISTRATIVE AREAS

Service Area	Objective	Input	Output	Efficiency	Service Quality	Outcome
Budget	To maintain a variance of no more than 2% between estimated and actual expenditures.	Budget/ actual costs SYE	Budget dollars managed	Cost per \$1,000 managed	Percent of budget expended	Variance between estimated and actual expenditures
Accounts Payable	To process payment for 95% of invoices within 30 days of receipt in order to maximize discounts and ensure timely payment of vendors.	Budget/ actual costs SYE	Payments made	Cost per payment made	Average time to process payments	Percent of payments processed within 30 days Discounts taken
Accounts Receivable	To increase the collection rate of funds due to the County by 5 percentage points from 90% to 95% in order to maximize revenue.	Budget/ actual costs SYE	Revenue collected	Cost per dollar collected	Percent of payments posted accurately	Collection rate
Human Resources	To improve recruitment time from 10 to 8 weeks, toward a target of 6 weeks in order to maintain adequate staffing.	Budget/ actual costs SYE	Vacancies filled	Cost per vacancy filled	Satisfaction rate with vacancy processing	Average recruitment time

Determining Program Costs

When calculating measures such as efficiency, it is necessary to provide accurate cost data. While there are different approaches to take in defining costs, the method Fairfax County uses for consistency is DIRECT COSTS PLUS FRINGE BENEFITS. Direct costs are those that are devoted to a particular service area within a cost center and include:

- Personnel Services (Character 20)
- Operating Expenses (Character 30)
- Recovered Costs (Character 40)
- Capital Equipment (Character 60)

Added to these direct costs, which may have to be prorated per service area, are the following fringe benefit factors. They should be applied to salaries. The factors are based on fringe benefit planning factors and are rounded for simplicity. They are as follows:

- | | |
|---|-----|
| ➤ General County/Trade/Manual/Custodial | 27% |
| ➤ Police | 31% |
| ➤ Fire/Deputy Sheriff/Animal Wardens | 43% |

Calculating Efficiency Indicators

In the third edition of this manual, an efficiency calculation spreadsheet was introduced with a standard methodology and format for calculating efficiency indicators, which are the relationship of inputs to outputs, e.g., cost per appraisal, cost per client, etc. This improvement was identified to enable agencies to prepare their efficiency indicators more accurately and consistently, as well as to allow DMB analysts to revise the indicators if the inputs, i.e., budget dollars have been adjusted.

The example on the next page is provided to show how an agency uses the spreadsheet. It assumes a .50 percent proration of one position and .25 proration for another. To further compute Character 20 costs, Fringe Benefits of 25 percent for General County Employees as well as Extra Pay are added. If the agency has Shift Differential, it should be added accordingly. Likewise, applicable costs in other budget characters (30, 40, and 60) would be calculated in a similar manner.

Cost Efficiency Calculation Spreadsheet

Example - For illustration purposes

Character 20 Calculation

Position Personnel Number	SYE Per Svc Area	Salary	Prorated Salary	Benefit Rate	Salary with Fringe Benefits	Extra Pay	Shift Differential	Total Cost
00111 Management Analyst II	0.50	\$48,579	\$24,290	1.27	\$30,875	\$467	N/A	\$31,342
00112 Admin Assistant I	0.25	\$25,317	\$6,329	1.27	\$8,038	\$365	N/A	\$8,403
Subtotal Personnel Services								\$39,745

Character 30 Calculation

Subobject Code	Description	Budget Amount	Percent Allocated	Total
3010	Service - Prof Consultant	\$50,000	0.20	\$10,000
3225	Supplies - Office	\$4,300	0.20	\$860
4250	Info Processing Services	\$11,900	0.20	\$2,380
4251	PC Replacement (2 PCs)	\$6,000	0.20	\$1,200
4302	Copying	\$2,150	0.20	\$430
	Subtotal Operating Expenses			\$14,870

Character 40 Calculation

Subobject Code	Description	Budget Amount	Percent Allocated	Total
6409	Personnel Services Recovered	-\$50,000	0.20	-\$10,000
6417	Operating Expenses Recovered	-\$4,300	0.20	-\$860
	Subtotal Recovered Costs			-\$10,860

Character 60 Calculation

Subobject Code	Description	Budget Amount	Percent Allocated	Total
6506	Data Processing Equipment	\$2,000	0.20	\$400
6541	Office Equipment	500	0.20	\$100
	Subtotal Capital Equipment			\$500

Total Direct Costs	Char 20	Char 30	Char 40	Char 60	TOTAL
	\$39,745	\$14,870	-\$10,860	\$500	\$44,255

Efficiency Calculation

Total Direct Costs/Output	Cost/Output	Units of Output	= Cost Per Unit
\$44,255	\$44,255	1,200	\$36.88

Note: Fringe benefit rates are as follows for FY 2006:

- Fire & Rescue 43%
- Deputy Sheriffs 43%
- Police 31%
- Trade, Manual, and Custodial 27%
- General County 27%

Note: Use only the characters (20, 30, 40, 60) that apply.

Instructions for Using Efficiency Calculation Spreadsheet

1. Identify all direct costs that are associated with providing a particular service (for service areas addressed in the agency's Performance Indicators). Direct costs include Personnel Services, Operating Expenses, Recovered Costs, and Capital Equipment (if applicable), as well as Fringe Benefits.
2. For positions, identify the position number and annual salary.
3. It may be necessary to prorate positions by Staff Year Equivalent (SYE) where applicable. For example, a position may spend only 25 percent of its time on a particular service area's function. Document that percentage on the spreadsheet. The spreadsheet is set up to multiply the annual salary by the proration percentage to determine a prorated salary for the service area. If it is 100 percent, indicate that.
4. Determine the Fringe Benefit rate using the percentage indicated on the spreadsheet for the particular employee category. A formula is in place that will multiply that percentage by the prorated salary to determine the figure for Salary and Fringe Benefits.
5. If the position has any other associated Personnel Services costs, i.e., Extra Pay or Shift Differential, identify them. The spreadsheet will then calculate the Total Personnel Costs. Exercise caution when working with the spreadsheet to ensure that you do not delete the formulas or else you will have to add them back in to make sure that the calculations work properly.
6. For the remaining characters, Operating Expenses, Recovered Costs, and Capital Equipment, determine which if any, subobjects in these categories are used as inputs to provide the service identified. Add or subtract rows as necessary. If appropriate, prorate the cost center's budget according to the amount of resources dedicated to the service area. For the spreadsheet, enter the following data: subobject description, subobject code, budget amount, and percent allocated. The spreadsheet will calculate the total based on the amount and percent as long as the formula has not been deleted. Take care to ensure that data are not added in cells with formulas or it will override them.
7. The spreadsheet has been set up so that the formula cells which calculate the totals by Character link to the line identified as **Total Direct Costs** which then computes the total cost.
8. The above **Total Direct Costs** cell then automatically links to the last line of the spreadsheet. The agency should enter the number of outputs (should agree to outputs presented for service area's performance indicators). The spreadsheet will automatically compute the Cost per Unit.

Retaining Adequate Documentation

Agencies should retain complete documentation to support the performance measures reported. These documents can be paper, microfilm, microfiche or computer records. However, it is essential that the information be readily available for explanation and auditing to address questions and attest to the reliability of the data.

VI. RESOURCES

Staff

The Performance Measurement (PM) Team, consisting of staff from various agencies, is available for those seeking additional assistance and guidance. Agencies are also encouraged to work with their assigned DMB analysts as well to improve their performance measurement. The following is a list of PM Team members to contact for assistance.

Team Member	Agency	Telephone
Barbara Emerson, Coordinator	Department of Management and Budget	324-3009
Lisa Blecker	Fairfax-Falls Church Community Services Board	324-4426
Michael Cash	Office of Human Rights	324-2953
Norman Chmielewski	Department of Administration for Human Services	324-5978
Kristen Cigler	Department of Community and Recreation Services	324-5306
Sara Daleski	Department of Systems Management for Human Services	324-7135
Evy Duff	Health Department	246-8652
Liz Henry	Department of Family Services	324-7889
Mila Jao	Department of Finance	324-3150
Ed Jones	Department of Public Works and Environmental Services	324-5028
Laura Lazo	Department of Management and Budget	324-2049
Allison Lowry	Department of Family Services	324-3528
Doug Miller	Fairfax County Public Library	324-8322
Eric Mills	Department of Vehicle Services	324-3527
Cathy Spage	Department of Information Technology	324-3870
Bill Yake	Department of Management and Budget	324-2030

Performance Measurement Library

Another resource available to agency staff working to improve performance measurement is a collection of materials from other jurisdictions, the Government Finance Officers' Association (GFOA), the International City/County Management Association (ICMA), the Government Accounting Standards Board (GASB), the Innovations Group (IG), the federal government, various states, and other sources. Over 300 books, reports, articles, budgets, etc. have been consolidated into a library located in a conference room in the Department of Management and Budget (Suite 561 of the Government Center). A list of the materials contained in this library is included as Appendix C.

Agencies are encouraged to use these materials in order to save themselves time tracking down the same or similar documents. However, please contact your budget analyst or a team member from the Department of Management and Budget listed above to make an appointment to use the materials. This is necessary because the documents are in a conference room that is used for other meetings and an appointment will ensure access to them.

Intranet Website for Performance Measurement

An InfoWeb site on performance measurement was created in the fall of 1997 to provide the resources contained in this guide, communicate developments in the County-wide process and provide links to other resources on the Internet. Examples of materials on this site include manuals, forms, newsletters, and links to other useful performance measurement websites. The site can be accessed at the following address: <http://infoweb/dmb>

Other Resources

Also included as an appendix to this guide is an expanded glossary of performance measurement-related terms (Appendix B). As additional resources become available, they will be communicated to agency staff to assist in the continuing process of performance measurement.

PM Database

In 2002, the Department of Management developed a web-based performance measurement application for agencies to load PM data into a countywide database. This enhanced data integrity and greatly reduced reporting and analysis time. The database has several reports, foremost among are reports that show what percent of its targets an agency met, as well as how many were achieved within two percent of target. Each agency has a user ID and password. Questions about this database may be directed to Barbara Emerson in the Department of Management and Budget.

Measuring Customer Satisfaction

With the use of service quality as one of the indicators included in the Performance Indicator section of the annual budget, agencies have formalized their focus on measuring customer satisfaction. There are a number of ways agencies can measure customer satisfaction. We want to emphasize that agencies do not always need to develop and administer a "statistically valid" survey in order to measure service quality. In fact, Fairfax County citizens should not be deluged with surveys from multiple agencies. What is important is that agencies are making a regular effort to obtain feedback from customers on County services. Most agencies will want to begin with a simple, cost-effective approach to measuring customer satisfaction as discussed below. In order to help agencies work through this process, the Performance Measurement Team has developed some tips and guidelines to assist you in your efforts. In addition, the PM Team provides a class on Surveying for Customer Satisfaction. Although formal surveys are usually the first method that comes to mind to measure customer

satisfaction, agencies are encouraged to be creative and consider other cost-effective, easy to administer means such as the following:

- Response Cards
- Websites
- Interactive Kiosks
- Point-of-Service Questionnaires
- Telephone Surveys
- Written Surveys
- Secret Shopper

Response Cards - This can be a simple and low-cost way of measuring customer satisfaction. Usually these are postage-paid cards, containing less than ten questions that can be completed and mailed back at customers' convenience. The primary disadvantage to a response card is that size limits the amount of information that can be included and their return is not random. However, they represent one way to get feedback from your customers.

Websites - A number of agencies now have websites on the Internet. To allow for customer feedback, a feedback button can be provided so that users can comment on the site, or they can be directed to complete a brief questionnaire. This also allows customers to respond at their leisure. Again, these responses are not random and are of course, limited to customers who have access to computers.

Interactive Kiosks - An interactive kiosk allows customers to electronically respond to questions about services arranged in a menu format. For those agencies that have applications on the County kiosks or plan to, this presents yet another opportunity to solicit customer input.

Point-of-Service Questionnaire - Agencies that have a service counter also have the opportunity to provide questionnaires or suggestion boxes, enabling customers to provide immediate input. This may allow for a higher response rate than a response card as people may fill out the questionnaire while they wait or immediately after they receive the service. If an agency uses a questionnaire, it may also want to provide a return address so that customers can take the questionnaire home if they so choose.

Telephone Survey - The main advantage of telephone surveys is that they are relatively inexpensive and can allow for different variation of questions based on screening information. In addition, a telephone survey allows for a more rapid collection of data than a mail survey since data can be inputted simultaneously. However, there are disadvantages. To be done well, careful training and monitoring of interviews is necessary. The cost-per-interview is generally higher than those for mail surveys and may be subject to interviewer bias if not properly conducted.

Mail Survey - The advantages of a mail survey include no interviewer bias, the ability to handle large sample sizes, lower cost than telephone, and the ability to ask complex questions. However, the cost of a mailed survey can still be significant, especially if an agency is attempting to get a large sample size. In addition, the time involved to plan, design and administer a mail survey can be considerable. If your agency chooses to use this type of vehicle, please contact the Performance Measurement Team for guidance on design and sampling, as well as to coordinate the number of surveys being mailed to County residents.

Secret Shopper – Some agencies use “secret shoppers,” someone who is not known to the staff, to use the services and report back on the quality. An example is in the Department of Tax Administration where staff telephone Central Information staff to ask questions to determine if they are addressed correctly. If not, additional training is provided.

As discussed earlier, the results of the questionnaire or response vehicle will not necessarily be a probability sample; however, these results may be used in the Performance Indicator section of the budget. Since we are interested in the public’s response, as opposed to scientific sampling in every case, it is permissible to use the results in the budget. The only caveat is that these results should be footnoted to indicate that the results are based on X responses and the type of survey conducted should also be described.

SAMPLE AGENCY

Indicator	Prior Year Actuals			Current Estimate	Future Estimate
	FY 2003 Actual	FY 2004 Actual	FY 2005 Estimate/ Actual	FY 2006	FY 2007
Citizen satisfaction level with courtesy, knowledge and timeliness of counter staff	72%	76%	80% / 81%	85%	90%

¹Based on 1,378 point of service cards completed.

MORE PERFORMANCE MEASUREMENT TERMINOLOGY

Term	Definition	Examples
Accountability	A responsibility to be answerable or to render a full accounting of activities for resources entrusted to Fairfax County government and the application of those resources by County government. In a democratic society, governments are expected to be responsible for financial resources and performance of specific missions, goals, and objectives to the public, as well as elected and appointed officials.	<ul style="list-style-type: none"> • Legal accountability – Conforming to local statutes, as well as state and federal laws and regulations. • Policy accountability – Operating a program that conforms to the policy goals set by the governing body (“doing the right thing”). • Efficiency accountability – Ensuring that programs are operated efficiently (“doing it right”). • Process accountability – Meeting internal requirements for planning, budgeting, accounting, and reporting activities to facilitate auditing of performance, whether program or financial. • Effectiveness accountability – Measuring actual outcomes against objectives to determine if the job is getting done.
Benchmarks	In the context of outcomes and performance discussion, the term “benchmarks” refers to desired programmatic outcomes. It may include a target or standard for the program to achieve. Benchmarks in this sense should not be confused with the process of “benchmarking,” a term used in the context of total quality management and business process reengineering (BPR). Benchmarking has been defined as: “performance comparisons of organizational business processes against an internal or external standard of recognized leaders.” Most often the comparison is made against a similar process in another organization considered a “best practice.”	<ul style="list-style-type: none"> • Increase materials circulated per capita by 5% annually • Increase percentage of customer satisfaction from 92 to 95%
Efficiency Measure	Inputs used per unit of output, whereby a lower ratio is desirable. However, if it is presented as outputs per input, a higher ratio is preferred.	<ul style="list-style-type: none"> • Staff hours/client (input/output) • Cost/appraisal (input/output) • Miles of sewer pipe flushed/staff year (output/input) • Plans reviewed/reviewer (output/input)

Term	Definition	Examples
Output Measure	Quantitative measures of products or units of service provided to a service population.	<ul style="list-style-type: none"> • Building plans reviewed • Purchase orders processed • Traffic violations prosecuted • Facility square footage serviced • Immunizations administered • Library materials circulated
Performance Indicators	Measures or indicators of progress toward specified outcomes or benchmarks. Includes the relationship between inputs and outputs as well as outcomes, particularly as they are used to evaluate the efficiency and effectiveness of a cost center.	<ul style="list-style-type: none"> • Output: Meals provided • Efficiency: Cost per meal provided • Service Quality: Percent clients satisfied with meal quality • Outcome: Percent increase of clients who score at or below a moderate risk category based on NSF tool for one year.
Performance Measurement	The process of measuring government performance by tracking progress toward specific quantitative and qualitative outcomes.	<p>Examples of other governments noted for PM include:</p> <ul style="list-style-type: none"> • State of Oregon • State of Texas • Sunnyvale, CA
Performance Targets	<p>Standards against which to measure performance. Potential standards of comparison include:</p> <ul style="list-style-type: none"> • Previous performance • Performance of similar organizations • Performance of the best organization 	<ul style="list-style-type: none"> • The percentage of graduates this year compared to last year. • The percentage of graduates from a public high school who attend college compared to the rate for other public high schools. • The percentage of public high school graduates who attend college compared to graduates from prestigious preparatory schools.

Term	Definition	Examples
<p>Program Effectiveness Measure</p>	<p>Degree to which program/service outcomes are consistent with program objectives (desired outcomes), benchmarks, and other standards. Measures of citizen satisfaction are often included for this measure. It is different from cost-effectiveness where the emphasis is on inputs/outcome.</p>	<p>Objective: 90% of job trainees hold job for more than 6 months.</p> <p>Effectiveness Measure: Percentage of job trainees who hold job for more than six months.</p> <p>Objective: Maintain a citizen approval rating of at least 85%.</p> <p>Effectiveness Measure: Percentage of citizen rating government services "good."</p>
<p>Service Quality Indicator</p>	<p>Measure of the extent to which customers are satisfied with a program, or how accurately or timely a service is provided.</p>	<ul style="list-style-type: none"> • Percentage of respondents satisfied with service • Error rate per data entry operator • Frequency of repeat repairs • Response time for service Average wait time
<p>Workload Indicator</p>	<p>External drivers that convey effort required to perform some task or activity. Usually considered an output measure.</p>	<ul style="list-style-type: none"> • Number of vehicles to repair • Tons of solid waste to dispose Number of clients requesting service
